NEWS RELEASE

RANGE REPORTS SHARPLY HIGHER RESULTS DRIVEN BY RECORD PRODUCTION

FORT WORTH, TEXAS, JULY 26, 2006...RANGE RESOURCES CORPORATION (NYSE: RRC) today announced second quarter results. Results were driven by record production and higher realized prices combined with only a modest rise in costs. Revenues totaled \$177.7 million, a 48% increase over the prior year. Cash flow from operations before changes in working capital, a non-GAAP measure, increased 35% to \$108.0 million. Net income jumped 137% to \$51.3 million, while diluted earnings per share rose 124% to \$0.38. Second quarter earnings included \$19.4 million of non-cash hedging gains and a \$2.1 million non-cash stock compensation expense. Excluding these items, net income would have been \$39.9 million or \$0.31 per share (\$0.29 fully diluted). (See accompanying table for calculation of these non-GAAP measures.)

Due to higher realized prices more than offsetting a modest rise in unit costs, second quarter cash margins rose 21% to \$4.52 per mcfe. Oil and gas revenues totaled \$157.6 million, 33% higher than the prior year due to higher production and realized prices. Production increased 13% to 264 Mmcfe per day, comprised of 193 Mmcf per day of gas (73%) and 11,758 barrels per day of oil and liquids. Wellhead prices, after adjustment for hedging, averaged \$6.56 per mcfe, a 17% increase. The average realized gas price increased 12% to \$6.28 per mcf, as the average realized oil price increased 32% to \$47.30 a barrel. Operating expenses per mcfe increased only 2% (\$0.02) over the prior year and remained level with first quarter 2006. Production taxes per mcfe rose \$0.03 per mcfe over the prior-year but were \$0.06 lower than first quarter 2006. Exploration expense of \$7.1 million was 22% lower than the prior year. General and administrative expense per mcfe increased \$0.10 over the prior year due to higher personnel costs, franchise taxes and professional fees but were \$0.02 per mcfe lower than first quarter 2006. Interest expense increased \$0.05 per mcfe as a result of rising interest rates and greater fixed rate debt. Depletion, depreciation and amortization per mcfe increased modestly (\$0.09) over the prior year to \$1.53 per mcfe.

In late June, Range completed the acquisition of Stroud Energy for \$465.2 million, comprised of \$278.0 million of cash and assumed debt plus \$187.2 million of Range common stock. As previously announced, Range anticipates disposing of certain of the Stroud properties. At June 30, these properties are classified as "properties held for sale" on the balance sheet. The operations associated with the properties are reflected separately as "discontinued operations" and, therefore, are not included in production volumes or other operating statistics.

Second quarter development and exploration expenditures totaled \$156 million, funding the drilling of 273 (196 net) wells and 21 (15 net) recompletions. A 98% success rate was achieved with 269 (193 net) wells productive. By quarter end, 164 (97 net) of the wells had been placed on production, with the remainder in various stages of completion or waiting on pipeline connection.

For the first half of 2006, capital expenditures (excluding acquisitions) totaled \$260 million, funding the drilling of 479 (346 net) wells and 42 (35 net) recompletions. As a result of the Stroud acquisition, better than anticipated drilling success in a number of key areas and a greater working interest in offsetting development locations, the full-year capital budget has been increased from \$429 million to \$551 million. The bulk of the additional capital is earmarked for expanding both drilling and leasehold acquisition in Range's shale plays and CBM projects. The increased capital budget is anticipated to be funded by operating cash flow and asset sales.

Drilling activity in the third quarter remains high with 36 rigs currently running. During the second quarter, Range continued to expand several of its key drilling areas and emerging plays. Drilling

continues to ramp up in our tight gas sand plays. For the year, the Company plans to drill 439 wells, of which 221 had been drilled by June 30. The Company achieved a 100% success rate in this play which is low-cost, low-risk and highly repeatable. Approximately 3,300 tight gas sand wells remain in inventory. In our coal bed methane projects, which now cover roughly 400,000 acres, production has reached roughly 20 Mmcfe per day. To date approximately 1,000 CBM wells have been drilled, with roughly 3,000 remaining in inventory. We plan to test 30-acre infill drilling in the Nora field of Virginia later this year. Assuming success with the infill pilot, the number of undrilled CBM locations could rise significantly.

Our shale plays are now producing roughly 24 Mmcfe per day and cover in excess of 350,000 acres. In the Fort Worth Basin Barnett Shale play, the Company plans 40 wells in the second half of the year and targets six rigs running by year-end. In the West Texas Barnett Shale play, where Range has 20,000 acres leased, a 3-D seismic shoot is underway and an initial well planned for early 2007. In the Devonian Shale play of Pennsylvania, the Company has drilled 13 wells, with several wells yet to be completed to the shale. Three of the vertical shale wells have been on production for an average of five months and reserves appear to be in the range of 600 to 1,000 Mmcf per well. Plans are to have 10 vertical wells fraced and on production early in the fourth quarter. In addition, the Company has leased 20,000 acres in the Black Warrior Basin Floyd Shale play and is targeting another 20,000 acres before year-end.

Production also continues to climb from our field rejuvenation projects. At the West-Fuhrman-Mascho field in West Texas, production rose during the quarter to an all-time high of 25 (18.2 net) Mmcfe per day. The Company drilled its first down spaced five-acre well at Fuhrman, which produced at an initial rate of 100 barrels of oil per day. Plans are to drill three more wells on five-acre spacing. If successful, we have the potential to double the recovery from this field. At our Tonkawa project in northern Oklahoma, 41 wells have been drilled to date with encouraging results. These low-cost, low-risk wells are drilled to a depth ranging between 2,700 to 5,000 feet. More than 400 drilling locations have been identified on our acreage. Success also continues in our stacked-pay areas that now cover more than 200,000 net acres.

Finally, two key exploratory projects spud this month. The Smith #1 (25% working interest), a 22,000 foot Norphlet test commenced drilling and is expected to reach total depth around the end of the year. We also spud our first deep (12,000 feet) Trenton Black River well in western Pennsylvania with partner Fortuna Energy, Inc., a wholly owned subsidiary of Talisman Energy, Inc. Both of these wells are high-potential opportunities.

Commenting on the announcement, John Pinkerton, Range's President and CEO, said, "The second quarter succinctly reflects the focused execution of our strategy of consistent drillbit production growth coupled with opportunistic complementary acquisitions. Second quarter production increased 13%, reflecting our 14th consecutive quarter of sequential production growth. With the completion of the Stroud acquisition, we have raised our production growth target to 15% for both 2006 and 2007. Importantly, our inventory of drilling opportunities now exceeds 8,000, providing a rock solid foundation for future growth. Also, our technical teams continue to expand our key plays and are developing a number of exciting new opportunities. Our financial results reflect this progress as the earnings generated in the first half of 2006 are nearly equal to the earnings for all of last year. Looking forward, our deep drilling inventory, low cost structure and strong hedge position are anticipated to continue to fuel superior operating and financial results, while our shale, CBM and other emerging plays provide substantial potential value."

The Company will host a conference call on Thursday, July 27 at 2:00 p.m. ET to review these results. To participate in the call, please dial 877-207-5526 and ask for the Range Resources second quarter financial results conference call. A replay of the call will be available through August 3 at 800-642-1687. The conference ID for the replay is 2977563.

A simultaneous webcast of the call may be accessed over the Internet at www.rangeresources.com or www.vcall.com. To listen, please go to either website in time to register and install any necessary software. The webcast will be archived for replay on the Company's website for 15 days.

Non-GAAP Financial Measures:

Earnings for second quarter 2006 include ineffective hedging gains of \$1.9 million, \$17.5 million of gains related to mark-to-market on derivatives, a non-cash stock compensation expense of \$2.1 million, a loss of \$53,000 on sale of assets and amortization expense of \$143,000 on ineffective interest hedges. Excluding such items, income before income taxes would have been \$64.3 million, a 61% increase from the prior year. Adjusting for the after-tax effect of these items, the Company's earnings would have been \$39.9 million or \$0.31 per share (\$0.29 fully diluted). If similar items were excluded, 2005 earnings would have been \$25.0 million or \$0.21 per share (\$0.20 per diluted share). In 2005, results were impacted by a net \$14,000 ineffective hedging loss on commodities and interest and \$5.3 million of non-cash stock compensation expense. (See reconciliation of non-GAAP earnings in the accompanying table.) The Company believes results excluding these items are more comparable to estimates provided by security analysts and, therefore, are useful in evaluating operational trends of the Company and its performance relative to other oil and gas producing companies.

Cash flow from operations before changes in working capital as defined in this release represents net cash provided by operations before changes in working capital and exploration expense adjusted for certain non-cash compensation items. Cash flow from operations before changes in working capital is widely accepted by the investment community as a financial indicator of an oil and gas company's ability to generate cash to internally fund exploration and development activities and to service debt. Cash flow from operations before changes in working capital is also useful because it is widely used by professional research analysts in valuing, comparing, rating and providing investment recommendations of companies in the oil and gas exploration and production industry. In turn, many investors use this published research in making investment decisions. Cash flow from operations before changes in working capital is not a measure of financial performance under GAAP and should not be considered as an alternative to cash flows from operations, investing, or financing activities as an indicator of cash flows, or as a measure of liquidity. A table is included which reconciles net cash provided by operations to cash flow from operations before changes in working capital as used in this release. On its website, the Company provides additional comparative information on prior periods.

RANGE RESOURCES CORPORATION (NYSE: RRC) is an independent oil and gas company operating in the Southwestern, Appalachian and Gulf Coast regions of the United States.

Except for historical information, statements made in this release, including those relating to substantial potential value, future earnings, future growth, new opportunities, future cash flow, capital expenditures and production growth are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. These statements are based on assumptions and estimates that management believes are reasonable based on currently available information; however, management's assumptions and the Company's future performance are subject to a wide range of business risks and uncertainties and there is no assurance that these goals and projections can or will be met. Any number of factors could cause actual results to differ materially from those in the forward-looking statements, including, but not limited to, the volatility of oil and gas prices, the costs and results of drilling and operations, the timing of production, mechanical and other inherent risks associated with oil and gas production, weather, the availability of drilling equipment and services at reasonable costs, changes in interest rates, litigation, uncertainties about reserve estimates and environmental risks. The Company undertakes no obligation to publicly update or revise any forward-looking statements. Further information on risks and uncertainties is available in the Company's filings with the Securities and Exchange Commission, which are incorporated by reference.
